
HOT ADD-ONS - KICK-OFF FOR THE NEW HEAT MODULES

From ambitious hobby BBQ enthusiast to experienced BBQ master – the new HEAT outdoor kitchen from Outdoorchef offers the right solution for everyone. The flexible system from the Swiss BBQ manufacturer allows customers to put together their own customised outdoor kitchen according to the space available and their personal preferences. With high-quality materials, well thought-out storage space and first-class barbecue components, HEAT sets new standards for outdoor barbecuing. Innovative corner and refrigerator modules are now brand new to the range, complement the system perfectly and can be experienced at this year's Ambiente at the Outdoorchef booth. They also feature the durability, high-quality workmanship and design that make HEAT the first choice for discerning barbecue enthusiasts looking for an unrivalled outdoor barbecue and cooking experience.

THE HEAT SERIES - ONE SYSTEM, ENDLESS POSSIBILITIES

The HEAT series offers everything you need for the perfect barbecue experience. The new outdoor kitchen delivers performance thanks to the powerful 4- or 5-burner grill module and the Blazing/Cooking Zone ensures unlimited options. There is even space for gas cylinders weighing up to 11 kg under the 4- or 5-burner grill module.

The HEAT organiser system features a practical, pull-out design, while all doors and drawers are equipped with the smooth Soft-close function. Each module has solid, height-adjustable feet as well as robust heavy-duty rolls that allow effortless manoeuvring on the terrace. Made from high-quality, powder-coated stainless steel, the HEAT outdoor kitchen offers maximum weather resistance. It is now rounded off by the new corner module, the fridge module, which is also an absolute must-have for every outdoor kitchen owner, as well as the sink module and the corresponding worktops.

PLACED AROUND THE CORNER - THE HEAT CORNER MODULE

A corner module is just a corner module? Not at all. Like all components in the series, this extension comes with all kinds of details that are practical, efficient and robust. With the solid, powder-coated stainless steel corner module, the outdoor kitchen can be turned into an L-shaped or U-shaped kitchen unit. It offers storage space so that no space is left unused. For example, accessories or a cooling box can be stored inside. The top plate is equipped with gas pressure dampers – for easy opening and closing. The shelf is also height-adjustable so that the depth can be varied. Just like all other HEAT modules, the corner module also comes with solid feet with integrated rolls for stability and easy mobility as well as panels for a look that fits harmoniously into the overall picture. This also applies to the work top, which is available in matching decors: HPL, granite or stainless steel. The corner module can be combined with all HEAT grill modules.

FROM HOT TO COOL - THE FRIDGE MODULE

Many outdoor kitchen enthusiasts want to have everything in one place, and this also applies for the fridge in which, for example, meat is marinated or drinks are kept cold. The HEAT fridge module incl. CASO Barbecue Cooler with an internal volume of 63 litres can be combined with all HEAT modules. The coloured UV safety glass door is self-closing and gives the module a cool look. There is also additional storage space next to the fridge with a height-adjustable shelf. The housing of the module is made of stainless steel and is available with the same robust feet and castors, as well as panels and decors as the other modules.

THE HEAT SINK MODULE - TIME TO CLEAN

Wherever there is a barbecue, there are of course one or two accessories that need to be washed to be ready for use again. But you don't have to go into the kitchen to do so. Thanks

to the HEAT sink module with fully integrated rectangular stainless steel sink, single-lever tap and pull-out spray and swivelling tap, the outdoor kitchen is an all-rounder. The integrated drain valve make the module a fully functional and valuable add-on. It also comes with additional storage space in the base cabinet with 2 soft-close doors – naturally also made of powder-coated stainless steel for maximum durability and a harmonious look.

CREATING THE HEAT OUTDOOR KITCHEN USING THE CONFIGURATOR - EASY AND CONVENIENT

With the user-friendly HEAT configurator, the outdoor kitchen can be effortlessly customised to individual wishes and conditions. In just a few clicks, you can create a customised plan that can be saved directly as a PDF with a parts list and cost overview – from the comfort of your own home or directly at a local partner specialist dealer. The configurator can be found here: <https://www.outdoorchef.com/de-DE/outdoorkueche/konfigurator/>
